

Jigsaw Puzzle How to

Playing a Jigsaw Puzzle on your computer is both fun and easy. No longer will you have to turn over the pieces to see what's there and best of all, no more missing pieces. Your dining room table will be free of clutter and neither will you have to crawl around on the floor looking for that fallen piece or pieces.

This screen shot shows you how the puzzle will look on your computer once you download and open it. Clicking on the "Title bar" JigsawsAnd on the top bar will automatically load your browser and take you back to my site where you can download more fun puzzles or to my wife's Avon site; whichever link is being used at the time.

(Clicking the link of course is optional)

To move and connect a puzzle piece:

Select a puzzle piece by clicking on it with your left mouse button then dragging it to another piece you want to connect to. Once you have the pieces aligned then let go of the mouse button and if it is properly placed you will hear a "click" as the pieces are locked in place.

Puzzle piece rotating:

Rotate a puzzle piece by clicking on it with your "Left" mouse button then while holding the "Left" button, press the "Right" button and the piece will rotate 90 degrees with each click of the "Right" mouse button.

Menu Icon

The Menu Icon allows you to view the image in 5 different sizes, making it easier to identify a particular puzzle piece location.

Image Viewer

The Image Viewer has five buttons which give the added convenience of viewing your image in the size of your choice. Click on the arrow to minimize the image or click on the X to completely remove it from view. You can always get it back when you need it by clicking on the View Picture in the Menu Icon dialog box.

NOTE: You can move and place the Image viewer and Menu Icon anywhere on the screen simply by clicking on the blue name field on each.

Moving Multiple pieces:

Click on a blank spot near the pieces you want to move all at one time and move your mouse in the direction you want to select while holding the left mouse button. Once you have completed your selection you will see all the selected pieces highlighted. Move them to wherever you want then to de select them, click on a blank spot once again. This makes it convenient to move multiple pieces out of your way.
